

Covering the court

Every tennis court owner likes the idea of a durable, tough surface with excellent traction and bounce. Resene Tennis Court Coating is an ace when it comes to resurfacing or building from new.

Resene Tennis Court Coating can be applied over asphalt or concrete and is available in five standard colours – green, dark green, blue, dark blue and terracotta, while special colours can be made to order.

After withstanding years of hard play, the system on a properly constructed court can be easily renewed without costly removal, relaying or reconstruction work, bringing brand new life with a choice of new colours to existing courts.

Concrete courts are prepared by acid etching, water blasting and finishing, while repaints follow a simple system of a thorough clean down, rinsing, spot priming if required and top coating.

The complete system is ideal for schools, councils, clubs and resorts that require a durable economical multi-usage facility to play tennis, netball, indoor soccer and other ball sports. As an all seasons surface system the integral colour stays attractive and rich for years.

Resene Tennis Court Coating has an ITF rating of slow, with an average surface pace of 25.6, making it ideal for tennis clubs and courts at resorts, schools and other similar venues.

With the non-skid attractive finish helping with the footwork side of the game, tennis players can cover the court in confidence.

Resene Tennis Court Coating is available from Resene ColorShops.
