Resene Galvo One
galvanised steel primer

Resene Galvo One is a single pack primer based on alkyd resins and special anti-corrosive pigments. Specially developed for direct application to new and weathered galvanised steel. Effectively welds itself to galvanised steel and stops zinc corrosion. Also suitable for use on Zincalume.

exterior

Typical uses
- Downpipes
- Flashings
- Galvanised steel
- Gutters
- Long run and corrugated iron
- Zincalume

Performance and limitations

Performance
1. May be applied over a wide range of temperatures (10-30°C).
2. Excellent adhesion to galvanised steel and Zincalume.
3. May be overcoated with most roof paint systems, such as Resene Hi-Glo (see Data Sheet D31) and Resene Mica Bond (see Data Sheet RA71), any time over a period of three months.
4. May be used on roofs that are to be used for the collection of drinking water when topcoated.
5. Suitable for use over lightly rusted galvanised steel and Zincalume.

Limitations
1. Allow extra drying time when used under high build coatings, such as high build chlorinated rubber.
2. Areas showing significant red rusting will require an additional priming system.
Galvo One galvanised steel primer

Surface preparation
**Galvanised steel, Zincalume - new**
Degrease and wash thoroughly with Resene Roof and Metal Wash (see Data Sheet D88). Liberally rinse with freshwater.

**Galvanised steel, Zincalume – weathered**
Wash thoroughly with Resene Roof and Metal Wash (see Data Sheet D88) and scrub to remove all signs of white corrosion. Liberally rinse with freshwater.

**Red rusted areas**
Remove all red rust by thorough hand or power wire brushing. Spot prime with Resene Rust-Arrest (see Data Sheet RA30A). For badly rusted roofs consult the Resene Engineered Coating Systems Division for specialist advice.

**Repaints**
Remove all loose material and wash thoroughly as above. Pay particular attention to paint immediately adjacent to flaking areas as adhesion is often suspect.

Caution
Windblown salt deposits onto roofs very quickly and surprisingly far inland. It is recommended that the roof is thoroughly washed with freshwater every day before starting to paint.

>Sanding dust from old lead or chromate based paints or old building materials containing asbestos may be injurious to the health if inhaled or ingested. Seek expert advice if the presence of these materials is suspected.

Application
Apply by brush, roller or spray.

New work
1. Best results are obtained by brush to ensure maximum contact with the steel.
2. Apply one full coat of Resene Galvo One allowing 12 hours before recoating.
3. For severe marine exposures and non-rainwashed areas, such as the undersides of metal gutters, apply a second coat of Resene Galvo One.

Repaints
Spot prime all bare and lightly rusted areas with one coat of Resene Galvo One. Where severe corrosion is present, spot prime with Resene Rust-Arrest (see Data Sheet RA30A) followed by a full coat of Resene Galvo One.

Precautions
1. FLAMMABLE - Keep away from heat and open flame. Keep closed when not in use.
2. Avoid breathing vapour - use with adequate ventilation.
3. Resene Rust-Arrest (see Data Sheet RA30A) should not be used where drinking water is to be collected.
4. The greatest protection of galvanised steel is achieved by priming as soon as practical after erection.
