

Resene Roof Paint Systems.

The Resene guide to painting your roof.

Resene
The paint the professionals use.

Resene

Hi-Glo Acrylic Roof Chart.

Paints that protect, colours that last.

The last two digits of the colour code indicate the light reflectance value of that colour, on a scale where perfect white = 100, jet black = zero. Heat absorption (and thus surface temperature) is minimum on white surfaces, maximum on black.

Micaceous iron oxide colours (HK and HL, below) provide super durability with an appealing metallic glint.

ALSO AVAILABLE IN BLACK AND WHITE.
★ AVAILABLE IN 10 LITRE PAILS

There's a Resene system right for your roof.

More than 90% of New Zealand homes are within 10 kilometers of the sea. Our roofs have to be protected from salt-laden air and high levels of UV light. It is vital you use both the paint and the primer that are up to the job.

Resene Roof Paint systems are the product of a New Zealand company with 40 years' experience developing the best possible paints for our conditions. You can be confident you'll get the results you want.

RESENE HI-GLO ACRYLIC ROOF PAINT

Made with UV-resistant pigments and tough acrylic polymers to give a long-life high gloss finish to new primed roofs or previously painted roofs. Dries fast to form a flexible, weatherproof surface. Also available in 11 micaceous iron-oxide colours. Brushes or rollers wash up in water. Suitable for use where domestic drinking water is collected. See Data Sheet D 31.

RESENE MICA BOND ALKYD FINISH

Provides extra protection in exposed, salt-laden environments with a plate-like protection (similar to overlapping fish scales) that seals out weather, resists UV light. Dries to a durable low-lustre finish. See Data Sheet RA 71.

THREE PURPOSE-DESIGNED PRIMERS.

1. RESENE GALVO ONE GALVANISED IRON PRIMER

This proven formula is the most widely-specified primer in use in New Zealand today. Fast-drying anti-corrosive Galvo One effectively welds itself to new or old (even lightly rusted) galvanised iron, provides the ideal surface for a long-life topcoat. Also recommended for use over aluminium. Can be over-coated any time over a three month period. Unique formulation means when top-coated, it is suitable for use where drinking water is collected. See Data Sheet D 41.

2. RESENE RUST-ARREST ANTI-CORROSIVE PRIMER

Designed specifically for severe red rust problems. See Data Sheet RA 30. Not to be used where domestic drinking water is collected.

3. RESENE VINYL ETCH METAL PRIMER

For professional application to galvanised iron, aluminium roofs and sidings and all non-ferrous surfaces. See Data Sheet RA 31. Not to be used where domestic drinking water is collected.

RESENE ROOF WASH

Concentrated pre-treatment for all new and old unpainted galvanised roofing, and general cleaner for previously painted surfaces including roofing. See Data Sheet D 82.

RESENE MEMBRANE ROOFING PRIMER

For all sheet rubber roofing systems. Also has incomparable adhesion on bituminous surfaces. See Data Sheet D 49.

How to get the best results.

Before you choose a Resene system, check the condition of your roof. Tell the professional in the Resene Color Shop the state of the old paint, whether new iron has weathered or not. Details like these will help you get the right advice, and a better result.

Follow the directions on the Resene cans. They're the result of extensive experience and knowing what works best.

Remember: If you have any questions, call Resene Paints Limited or your local Resene Color Shop. We are keen to help.

PAINT AND TANK WATER

Recommended systems for domestic water collection off roofs are Resene Galvo One with either Resene Hi-Glo Acrylic or Resene Mica Bond. Before applying Resene roof paint disconnect all down pipes until after the first heavy showers have flushed away stabilising surfactants from the new paint film.

HOW MUCH PAINT?

A good rule-of-thumb guide for calculating quantities is: your house's floor area **plus** about 40% (allows for roof pitch, corrugations, soffit overhang etc). Trough-section roofing can require significantly more. Typically the system requires one coat of primer, two of top-coats at the recommended coverage rate specified on the cans.

Resene Test Pots guarantee that the colour you choose in the store is the colour that's right in your home.

Resene Test Pots come in over 900 beautiful colours. And you'll find them only at Resene Color Shops and Stockists.

COLOUR RANGES

The colours on this chart have been chosen for the durability and colour-fastness of the pigments used in them. You can also choose from many others in the BSS 2660, 5252 and Resene Total Colour System, which can be custom-tinted for you.

COLORSTEEL COLOURS

For trims, flashings, gutterings etc Resene roof paints are available in all Colorsteel colours:

ironsand,	bone white,	permanent green,
lignite, scoria,	gold, grey friars,	chocolate,
karaka, lichen,	tuscan red,	nut brown,
tussock, titania,	denim blue,	beige,
beech, charcoal,	biscuit,	torres blue.

For heavy duty applications, Resene Paints can supply a full range of specialist coatings. For information call your local Resene specialist.
