

Glossary

Complementary

A scheme made up of colours that are opposite each other on the colour wheel, such as red and green.

Contrast

The effect of using different colours or tones side by side.

Hue

Pure colour – it can be another name for colour.

Primary colour

Colour that cannot be produced by mixing any two other colours. Primary colours are: red, yellow and blue.

Reflectance value

Degree of lightness or darkness of a tint, shade or tone. White has the highest reflectance value and black the lowest.

Secondary colour

Colour formed by mixing together two primary colours. Secondary colours are: orange, green and purple.

Shade

A pure colour (hue) with black added. This new colour has a lower reflectance value (is darker) than the original colour.

Tertiary colour

Colour formed by mixing together any two secondary colours.

Tint

A pure colour (hue) with white added. This new colour has a higher reflectance value (is lighter) than the original hue.

Tonal scheme

Monochromatic. Using several values of one colour.

Tone

A pure colour (hue) with grey added. This new colour is a softer variation of the original.

Total Colour System

The Resene colour system divided into palettes with notational coding to reflect each colour's position in colour space.

Traditional

Proven colour scheme that has been used successfully over a long period of time.

Variants

Varying shades of one colour, such as Resene Half Spanish White or Resene Quarter Spanish White.

Introducing The Range 2008, a collection of fashion and classic colours by Resene conceived for the year 2008.

A heavy blend of colour options inspired by elements of fashion, nature, the economy and the world come together into the 2008 palette.

Continuing the trend from 2007, colours are transitioning slowly, staying current longer – a stark contrast to the short sharp colour bursts earlier in the decade. Seasonal colours are becoming sought after as a way to carry forward fashion, with colours being refreshed by texture, pattern and placement rather than a change in the colour. Forecasting is increasingly balancing the fresh new brights with a sense of the traditional, bringing the two together to provide vintage hues freshened by new fashion blurs. Many colours are underpinned by historical hues, comforting in their familiarity.

Just as the distinction between clothing fashion and decorating fashion blurs, so too does the distinction between home and work schemes. As family and worklife increasingly merge at frenetic speed in the same locations, palettes and styles sympathetic to both environments are becoming increasingly common.

We are moving to a borderless existence when both work and life, domestic and international, blend together. This perpetual connectedness is underpinning a growing sense of responsibility to the globe and the interest in sustainability – not a 'deep' green way of life, but a greener way of living a normal life from minimising packaging to using authentic eco-friendly alternatives as everyday products.

Rooms designed purely for relaxation, meditation and yoga will find their way into new homes as a source of stress release – the modern light on the senses version of the long forgotten quiet, yet highly saturated, reading retreat. While technology developments hasten, the desire for calm balances the urgency and provides breathing space, with homes being decluttered to enable simpler living; less complicated lives with better quality but fewer possessions.

With technology bringing the world to the fingertips and doorsteps of far flung nations, ethnicity continues to drive new colour directions and themes, true to origin colours rather than westernised interpretations. With China hosting the Olympic Games, the Asian influence looks set to increase accompanied by the sari brights of India.

In a world of anything goes, selecting one colour is easy – it is combining them together into a satisfying colour scheme that becomes trickier. In lieu of defined colour rules, beauty will be the filter for successful colour schemes. The combination of colours will become key rather than any one hue in isolation.

Surrounding us daily, nature is always a strong influencer on the palette providing endless colour inspiration from earth, sky and sea. The palette is moving increasingly genderless and more elegant than previous years with the shocking brights becoming saturated. The influence of nature and especially ocean bound water brings the palette to a more middle ground.

The palette is warming with a host of warm earth tones joined by rich burgundies and browns, honey yellows and citrus greens, all lightly cooled with contemporary blues and greens. Organic greens were as the palette tends towards warmer tones. The purple family continues to strengthen as pinks wane, while the yellow family and orange edged yellows follow a similar uptrend. Expect to see the colours of sunset reinvented as relaxing interior backdrops.

Red is back buoyed by Asiatic origins and inspired by the warmth of wood bringing warm glowing shades full of depth. Bright reds will remain popular when maximum impact is a must.

Shadowy hues of murky blacks provide a background for other neutrals. Plain white is waning in favour of warming mid tones, which provide more comfortable backdrops for furnishings and, like clothing, more practical tones for cleaning and the rigours of everyday living. Off-whites, rich browns and metallic greys anchor the neutral palette, joined by the soft tones of chalky pastels as broad appeal. Barely there hues will act as visual cleaners.

Inject some life into your colour with The Range 2008 collection. Enjoy!
