

Resene colour charts are updated regularly. This colour chart file is part of the colour chart archive, which we provide so you can view Resene colours that have been available over the years. Most older colours can still be tinted – check with your Resene ColorShop team if you need an older colour for your project.

Resene Multi-Finish Range Palettes 1-12

The Resene Total Colour System is a method of colour formulation, notation and presentation. It is divided into twelve different hue types, each of which is called a palette.

Each palette is given an identifying letter code as follows:

- BG = Bright Green
- YG = Yellow Green
- BY = Bright Yellow
- OR = Orange
- RO = Red Oxide
- BR = Bright Red
- V = Violet
- B = Blue
- GR = Grey
- GO = Green Oxide
- YO = Yellow Oxide
- BO = Brown Oxide

The colours vary down the column by a series of equal steps along a path of decreasing saturation and increasing lightness and reflectivity.

The strongest colour has the lowest number (1) and the palest tint has the highest number (8).

Vertical Rows 1 - 8 are all based on the same hue; decreasing saturation, increasing reflectivity.

Within each palette there are six different hues, each separated by a standard colour space. Where applicable, the hues are arranged across the palette in a logical colour sequence. For example, greens are arranged from blue-greens through yellow-greens, blues from red-blues through green-blues and so on.

Each hue is accorded a double digit number (from 10 to 60) representing its position across the palette. All colours in a horizontal row have equal colour weight.

Every hue has associated with it a vertical column containing another seven colours, each based on the same colour components of the hue and still having equal greyness. They are allotted a single digit number from 1 to 8, indicating the position in the column.

The Total Colour System includes nonfading bright reds that are as colourfast as inorganic pigments, together with permanent bright yellow shades. It has been designed to avoid the massive number of off-whites and/or greys which 'dilute' most other colour systems.

Some colours are more durable than others. Contact your local Resene ColorShop or Reseller for information on the durability of specific colours.

Colours for the environment

The Resene Total Colour System consists of seven organic palettes, providing very clean colours. Harmonising colours are found on the same or adjacent palettes; complementary colours on palettes directly across the disc.

Added to this are four earth palettes, based on oxide colours. These palettes are of particular importance for the selection of environmentally acceptable colour schemes. The final palette is of high fashion greys, using the full hue range from the other palettes to provide yellow tones, red tones, violet tones etc at various degrees of saturation.

The Resene Lumbersider colour chart and The Range also offer a range of earthy tones designed to complement the natural landscape.

Palettes arranged spatially into the Resene colour disc

Matching colours

Colour matching using the Resene Total Colour System is very easy due to the layout of the palettes. Having identified the hue type, most colours can be located in seconds.

Furthermore, because of the logical nature of the layout of each palette it is possible to use it to identify a desired colour space. For example, if a desired colour sits halfway between 4BG30 and 5BG30 it can be specified at 4.5BG30.

'See' the finish

Virtual painting with Resene EzyPaint allows you to visualise the entire colour scheme before the redecorating even starts.

Resene EzyPaint can be downloaded free from the Resene website www.resene.co.nz (NZ), www.resene.com.au (AUST) or purchased on CD Rom from your local Resene ColorShop or Reseller.

Put your colour to the test

No matter how you select your colours, always use testpots to confirm your choices in the area you are planning to paint. Either paint two coats directly onto

the surface or onto a large piece of white card leaving a small white border around all edges so that the colour does not 'pick up' from the existing colour. Remember that paint always dries darker, so if the testpot colour looks wrong, wait until it has dried to see the true colour.

Colour perception is affected by the background on which the colour is viewed, lighting and surface texture. Once you have used a testpot to paint an area, check it at different times of the day to see what it looks like under different lighting - you may like it during the day in bright natural light but not at night due to the effect of artificial light.

Most Resene testpots are available in a satin acrylic, so if you are planning to use a lower sheen the final colour will look duller and flatter than the testpot colour. Or if you are planning to use a higher sheen the final colour will look richer, brighter and more intense than the testpot colour.

Resene testpots give you the assurance that the colour you choose in your local Resene ColorShop or Reseller is the colour that's right in your home.

Resene testpots are available from your local Resene ColorShop or Reseller or you can order them online from the Resene website.

Explore a colour library

View an extensive range of Resene colour swatches in the online Resene colour library, then download the ones you like.

Once you have found your favourites, order testpots online and try them out for yourself in the real world. Or browse through the in-store libraries of colour that can be found at most Resene ColorShops. With over 1000 variously coloured A4 swatches to pore over, you're bound to find one that suits.

Choose to help the environment

The Total Colour System is lead-free. You can minimise the effect your next decorating project has on the environment by choosing one of the Resene range of Environmental Choice approved products.

WaterColours,™ an environmentally conscious process, was used to produce the colour chips on this colour card.
