1. Measure the width you want your wall panel to span (approx 10-20cm wider than your bed). Mask it vertically with painters' tape. Paint the panel with a Resene SpaceCote Low Sheen basecoat colour according to your choice of metallic paint.\*

2. Apply two coats of Resene Enamacryl Metallic on top of the basecoat. Leave to dry before taping the stencil.

3. Create a vertical and horizontal grid with painters' tape over the metallic paint. Rip pieces of tape and randomly fill in the grid sections with criss-crossed lengths of tape.

4. Apply two top coats of Resene Alabaster over the top of the tape. When dry, carefully remove the tape to reveal the web-like pattern underneath. Once you're happy with the look, clear coat the complete headboard with Resene Aquaclear to protect the metallic finish.

**\*NOTE** When using Resene Metallics, a basecoat is recommended for a more vibrant result. Once you've selected your metallic paint, you can find the corresponding basecoat on the Resene Metallics & Special Effects colour chart.
