HERITAGE

Recreate the authentic colours of traditional homes

Includes Traditional Maori Colour Palette

Traditional homes are an integral part of our heritage. It is therefore pleasing to see the growing trend towards restoring older homes and the subsequent resurgence of interest in the house colours of our past. Many homeowners with older houses, especially those pre-1940 are striving for authenticity in colour repainting to enhance the true architectural heritage of their homes.

In association with leading conservation architect Ian Bowman, Resene developed a set of colour guidelines to reflect the various historical periods of home design. This palette is showcased in this colour chart. To ensure the authenticity of the colour palette, Ian Bowman has meticulously documented the source building, structure or documentation for each colour. See www.resene.com/heritagecolours for more source detail.

It is important to note that the range of colours used in the past was somewhat limited and changes between periods were gradual. Not every early homeowner may wish to recreate the exact colour shades of another era, but for those who do, this collection is an ideal starting point for developing the right scheme.

When decorating old homes lead can be a health hazard. Small chips of lead containing paint or lead paint dust can create health risks. It can also contaminate the environment. Until 1965, many paints on the market had high lead levels. This was particularly true of pre-1945 paints. Even if a building has been recently painted, it may have been painted with lead-based paints or have layers of old paint covered by modern paint. Today only special purpose paints contain lead and these are clearly labelled.

For more information on dealing with lead-based paint see the Resene Putting your safety first brochure at your local Resene ColorShop or Reseller or alternatively you can visit www.resene.com/leadbased.

HOME GROWN

Resene

The story of New Zealand's own paint company

esene was started in 1946 by an Eastbourne builder, Ted Nightingale, who needed an alkali resistant paint to cover his concrete buildings. There was nothing available at the time, so in typical kiwi style he developed his own - in a

cement mixer in his garage! In response to demand from other builders, Ted commenced producing his paint on a commercial basis under the brand name Stipplecote.

Stipplecote was a cement based paint required by builders because there were really no paints on the market at that stage that were suitable for use over concrete. The initial garage production facility was superceded by the establishment of Resene's first factory in an old stable in Tinakori Road, Wellington.

In 1951, Ted Nightingale launched the first waterborne paint in New Zealand under the brand name 'Resene' - a name derived from the main ingredient of paint - resin. This launch was followed in 1952 by company registration under the name Stipplecote Products Ltd and a move to a new larger factory in Kaiwharawhara, Wellington.

A period of innovation was to follow. Waterborne paints had a very slow start. The marketplace was cautious with the new technology and had difficulty understanding that a waterborne paint would not wash off the walls with water.

Customers initially remained loyal to lead and solventborne paints. It was only after a massive sales effort that waterborne paint sales really took off. Demonstrations were run in shop windows showing boards being painted with waterborne paints and then the brushes being rinsed

off in water. People standing in the street could not believe that the paint wouldn't just wash off the board.

The market eventually responded to the new paint technology and Resene's perseverance paid off with a period of rapid expansion during the late 1950s and early 1960s. As the emphasis shifted away from cement based paints towards waterborne paints, the company name was changed to 'Resene Paints Ltd' in 1977.

Resene shifted premises from its older site in Kaiwharawhara to Gough Street in Seaview, Lower Hutt, where it remained for 25 years before shifting to its current location in Naenae, Lower Hutt in 1992. By relocating to the Seaview site, Resene became

situated in an industrial area, which later provided for further expansion with a second manufacturing unit a few blocks away.

1975 saw the launch of the first of a national chain of retail stores. The move into retail occurred almost by accident. Tony Nightingale (Ted's son and the then Managing Director) bought a wallpaper company that happened to own a store in Marion Street, Wellington. It was at this

site that the first store, originally called the Marion Street paint shop, was established. Following overwhelming success with the opening of this store, the ColorShop concept was conceived and duplicated in other regions. The brand name 'ColorShop' was selected in preference to 'ColourShop' quite simply because it was unique and the word looked better.

Resene also built itself a reputation as the colour leader, with a number of firsts in this area. In 1969 Resene introduced a new system of colour, the British Standard Specification colour range (BS2660 range), which provided a range of strong colours at a time when New Zealanders

were used to pastel colours. The stronger BS4800 range followed in 1973. Resene was also the first company to offer a full range of testpots in New Zealand in 1975.

Throughout this time, Resene has also been known as a leader in the development of environmentally friendlier products from the basic innovation of Resene waterborne paints to the removal of lead from decorative paints in the late 1960s well ahead of other manufacturers. To reinforce

this position, Resene joined the Environmental Choice programme in

1996, making it easier for consumers to select paints and technologies that ease the burden on the environment. The relatively recent innovation of waterborne enamels has enabled customers to substitute waterborne products for solventborne products.

Over a half a century on, the Resene Head Office is situated in Naenae, Lower Hutt supplying quality paints to both the New Zealand and international markets.

For more on the history of Resene, see www.resene.com.nz/nostalgia.

This heritage colour palette showcases colours used on commercial and residential heritage buildings reproduced using modern paint technology. The picture guides provided are designed to help you see how the colours would have been used on traditional homes so you can use the colours in authentic colour combinations.

For examples of the colours in use historically see Ian Bowman's additional notes online at www.resene.com/heritagecolours.

Inside, colours for all wall and ceiling surfaces and materials were carefully chosen to harmonise with each other, with common colours including crimsons, buffs, blues, greys, browns, reds, tans, olives, terracottas, greens, roses and golds.

Usually architraves, skirtings, doors, window sashes and decorative timberwork were all varnished or, later in the period, doors, architraves and skirtings were black japanned. Painted plaster ceilings and decorations became popular towards the end of the century.

The kitchen was likely to have had painted white or cream finished tongue and groove.

Late Victorian and Edwardian 1890s-1914

The most commonly used dark colours remained the dark greens and reds, and the maroons with dark browns. Light colours were creams, fawns, drabs, dark pinks, buffs, pale greens and greys.

Simpler homes retained the three colour palette with light weatherboards, dark trim and a different dark colour for the window sashes and doors.

The alternative scheme used the same range of colours but the weatherboards could be a dark colour and the trim a light colour.

The complex, detailed styles usually picked out trim and framing elements. Veranda posts had brackets and mouldings of opposite colours to posts, finials were an opposite colour to their brackets, doors had the panels a lighter colour than the stiles and rails, and gable framework was an opposite colour to the filigree detail between.

The same colours were used on roofs as in the earlier period.

Resene Burnt Sienna complemented by Resene Rich Cream, Resene Stack and Resene Ivy Green.

Resene Brown Pod, Resene Blue Night and Resene Butter.

Interior colour schemes were less bright with more colours used that were delicate and muted. Colours included soft pinks, soft greens, light and dark greys, blues, yellows and detail sometimes picked out in gold.

Dominion 1914-1945

This period saw a greater range of style and use of colour than ever before. The Californian bungalow became the most popular style for housing, using pale colours such as offwhites, buffs and creams for the body of the house and dark greens, dark reds and even blacks for trim and shingles under the gables and bay windows.

An alternative was for the entire house to be painted or stained black.

The Art Deco and Moderne styles from 1925

to the late 1940s used paler colours such as off-whites, pale greens, pale pinks and light browns. Details were picked out, often in contrasting colours such as Resene Kaitoke Green and Resene Blue Night or Resene Green House and Resene Cobalt.

Traditional Maori Colour Palette

Resene has for many years supported the Marae DIY series, which focuses on collaborative effort to protect and rejuvenate Marae buildings. Through those many projects, the Resene Heritage colour range has been a constantly referred to reference. In many cases early colours were similar for European and Maori buildings, purely because that was the limits of the colour technology and palette available. Traditional Maori colours do have their own unique nuances though, and thanks to Wiremu Puke, Maori ethnographer, these have now been reproduced in Resene colour with this Traditional Maori Colour Palette.

Key: D = Deep G = Green L = Light M = Mid O = Ochre

P = Pastel R = Red U = Ultra deep W = White

cc = Also available as a Resene CoolColourTM. A change in tone or product may be required for some colours to achieve a Resene CoolColour effect.

Note 1: The approximate light reflectance value (LRV) of a colour indicates the amount of visible light that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfaces are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour ™ is formulated to reflect more of the sun's energy, improving the colour's heat and total solar reflectance [TSR] properties compared to a normal colour, keeping the coating, substrate and building cooler.

and other some retention of the control of the cont

Note 3: Tones listed above are subject to change if colours are reformulated.

Note 4: Colours may be available in selected products or sizes only. Check with Resene ColorShop or Reseller staff to ensure your selected colour is available in the product and/or size you require.

Note 5: This colour chart is finished with Resene SpaceCote Low Sheen waterborne enamel, a product ideally suited to kitchens, bathrooms and broadwall areas.
