Resene Aquaclear has been developed as a waterborne alternative to taps. Thinned oil modified urethanes to enhance and protect timber. Resistance to moisture, heat and ultraviolet radiation is required, such as high traffic floors, a moisture-cured urethane, such as Resene Polyurethane, is recommended.

**Preparation**
- Ensure surfaces to be coated are in sound condition, dry, free from dirt, dust, loose material, oil and grease.
- For new or previously unpainted wood soak with 10% Resene Mess & Mould Killer (see Data Sheet DRI).
- Stop nail holes and cracked timber with a suitable filler.
- Thoroughly sand surfaces prior to coating. Finish off with fine sandpaper, remembering always to sand with the grain.
- Previously varnished surfaces must be sanded to remove all gloss and provide a key for good adhesion. If old varnish is flaking everything must be removed to ensure a uniform appearance.
- Thoroughly vacuum all surfaces to remove surface contaminants and sanding dust. Special attention to residual floor polish in the gaps between tongue and groove flooring.
- All sanding dusts may be harmful and appropriate protection must be worn. In particular dusts from old lead or chromate based paints or old asbestos containing building materials may be injurious to health if inhaled or ingested. Seek expert advice if the presence of these materials is suspected.
- This product may be used to coat a wide variety of surfaces. If the surface you propose to coat is unsound or not referred to, try a small test area first or contact your local Resene ColorShop or Reseller for advice.

**Application**
- For uncoated surfaces this first coat up to 10% with clean water.
- Stir thoroughly with a wide flat stirrer and pour in one go. Add a speed brush, synthetic bristle brush or Resene No-4 roller (product can be sprayed). Apply evenly.
- Avoid working over a surface that has begun to set as this will give a patchy appearance.
- Allow at least two hours between coats.
- To avoid foaming of material, do not brush or roll vigorously.
- Do not apply in direct sunlight. This may result in film failure. For further painting advice and results or system failure. For further painting advice and results or system failure. For further painting advice and results or system failure. For further painting advice and results or system failure.

**Thinning and clean up**
- Water. First coat may be sprayed.
- Can also be applied with synthetic bristle brush or roller.

**Usual number of coats**
- Three. New work – four coats.

**Primer required**
- No.

**Recoat time (minimum)**
- 2 hours.

**Dry time (minimum)**
- 2 hours.

**Drying is slowed by low temperatures and high humidity.**

**Contact your Local Authority for disposal information.**

**Spills**
- Wear appropriate protective clothing. Absorb with sand or earth. Collect and seal in properly labelled drums. Do not allow to enter drains or to run off into waterways. Refer to local waste management authority.

**FIRST AID**
- If swallowed: Do not induce vomiting. Call a POISON CENTRE doctor or physician if you feel unwell.
- If ON SKIN (or if on clothes): Rinse with plenty of soap and water. If skin irritation or rash occurs get medical advice or attention.
- If IN EYES: Rinse cautiously with water for several minutes. Do not rub eyes. For full technical instructions see Data Sheet D59.

**Use on:**
- Interior timber surfaces.
- Gloss level: Satin, semi-gloss and gloss.
- Coverage (average): 12 square metres per litre per coat. Spreading ratios are given for bare timber – take care not to overspread on sealed surfaces.

**Dry time (minimum):**
- 30 minutes. Do not apply at temperatures below 10°C or when temperatures are liable to drop below this during the drying period.

**Drying:**
- Air-dried low temperature and high humidity.

**Do not allow to enter drains or to run off into waterways.**
