Resene Aquapoxy is a high performance two part waterborne epoxy ideal for walls and floors, including concrete garage floors. The cured film is non-yellowing with high surface hardness and excellent flexibility. It exhibits excellent adhesion and water resistance, and is tolerant of mild weathering and damp surfaces. Its excellent solvent resistance makes it very resistant to graffiti. The steam resistance is similar to conventional solventborne epoxies.

For tips on responsible disposal of paint, cleaning equipment and minimising the impact of your decorating project see the Resene website. Do not use household garage degreasers. Contact your local Resene ColorShop or PaintWise (NZ) or paintback.com.au (Australia) accepts residues of the substrate should be 3°C above the "Dose Point". 

The "Dose Point" requirement can be presumed to be satisfied if a thin clearly defined film of water applied to the cleaned surface with a damp cloth evaporates within 15 minutes.

If medical advice is required have product container or label at hand. Call a POISON CENTRE, doctor or physician if you feel unwell.

If inhaled: Remove to fresh air and keep at rest in a position suitable for breathing.

If in eyes: Rinse cautiously with water for several minutes. Remove contaminated clothing and wash before reuse.

If on skin: Wash with abundant quantities of soap wet or dry. If irritation or rash occurs get medical advice or attention. Take off any contaminated clothing.

If swallowed: Rinse mouth. Do NOT induce vomiting immediately, call a POISON CENTRE, doctor or physician first and ask for further advice.

If suspected exposure: Isolate the exposed person and if necessary, seek medical advice.

General

Material safety data sheet (MSDS) is available and must be consulted before use.

In every case it is recommended that the current Resene Data Sheet is consulted for product data and surface preparation information.

Resene Aquapoxy is a two-part Aliphatic Hardener, which must be mixed in the required ratio using an air or explosion-proof mixer before application. Mix each component separately before blending them together. Add the total contents of the Hardener container to the total contents of the Base container. Once uniformly mixed, allow to stand for the recommended induction time prior to re-mixing and use.

Thinning: May be necessary for large areas, but ensure that the mix proportions do not vary from those recommended. Resene Aquapoxy for Flooring RA43.

Resene Data Sheet: Resene aquapoxy semi-gloss RA42.

Recommended dry film thickness (DFT) is 130 micrometres. Minimum theoretical coverage is 10 square metres per litre at 44 micrometres DFT.

Mixing ratio: 1 part Resene Aquapoxy semi-gloss base to 1 part Resene Aquapoxy high performance wall and floor paint.
