Resene Armourcote 510 is a high performance, self-priming epoxy semi-gloss coating containing superior additives with true barrier properties. Will tolerate corrosive surfaces such as康fined coatings. It is a two-component epoxy with a fast setting characteristic and will set within minutes to a tough, hard-film. It requires a two-part hardener system, Armourcote Thinners No. 12 and No. 6.

For full instructions see Ref 1263. All work to be carried out by an accredited tradesperson. For more information contact Resene 0800 737 363 for a copy of the Resene Data Sheet or contact your local Resene ColorShop or Reseller for your nearest Representative.

Armourcote 510 is designed for use in high-traffic areas such as garages, basements and industrial environments. It is particularly suited to areas which are exposed to moisture or chemical attack. It has excellent durability and resistance to UV and the effects of chemical attack. It is recommended for use in food processing environments where high hygiene standards are required.

**Safe use & handling**

- **Avoid** breathing the fumes of the product and the hardener. Wearing a breathing mask and loose-fitting clothing is recommended when using the product. When using the product, avoid inhaling its fumes or having them come in contact with the skin or eyes.
- **Caution**: Wear gloves and eye protection when handling the product. Do not use the product if you have a history of sensitivity to epoxy resins.

**Precautions**

- **For full technical instructions see Ref 1263.**
- **For information contact Resene 0800 737 363 or call Resene 0800 P 131 126 or call Resene 1800 738 383.**
- **Note** that the ingredients of this product and its hardener are toxic to aquatic life with long lasting effects. Do not contaminate any water supply.
- **Proprietary and trade names** refer to the materials as used by Resene and may not imply endorsement or exclusive right to use.

**Technical data**

- **Paints**
- **Resene Armourcote 510:**
- **1**: The paint comprises a base and hardener, which must be mixed in the recommended ratio before application. Pre-mixing the components in the hardener container to the total contents of the base container is recommended. Care should be taken to avoid contamination of the mixture, and an explosion proof mixer until thoroughly blended.
- **Most**: The mixture of base and hardener should be blended and thoroughly re-mixed using the power mixer to achieve a uniform consistency before application. The mixing ratio is 1:1 by volume. The pot life, which is given for a specific temperature, can be affected by low temperatures and will increase. If the temperature of the mixture is reduces, the pot life of the product will be extended.
