Resene Enamel Undercoat is a blend of special alkyd resins balanced with unique pigments. An acrylic binder, blending, wash, hard wearing paint with an exceptional finish and wearing properties. That allows without the unattractive and strong odour associated with traditional oils. For best results, Prime exterior timber with Resene Wood Primer (see Data Sheet D40). Where a Resene CoolColour™ system is being used, undercoat of white shade is critical for a successful topcoat. For exterior use. Due to improved performance, previous Resene Enamel Undercoats are no longer available. Primer required: Depend upon the surface type. See Data Sheet and local colour card. Coarse or natural finishes such as stone, brick, or rough contractor may require an extra coat. 

Preparation
- Stock Resene Enamel Undercoat in a suitable container close to your work area. One or two coats is generally sufficient for all other surfaces. This may require use of an extraction system when painting critical lighting areas. 

USING THE FABRIC
- Buff to a soft gloss with an appropriate filler after priming. 

SAFETY PRECAUTIONS
- Keep application area well ventilated with access to fresh air. 
- Do not inhale or allow the material to come into contact with skin or eyes. 
- Do not eat or drink under the influence of alcohol. 
- Do not mix or store with other chemicals. 
- Do not store in another container. 
- Always use the correct Resene Enamel Undercoat or any shade for your topcoat. 
- Resene Enamel Undercoat contains isocyanate and the isocyanate is hazardous material, refer to local waste disposal information.
