Resene Galvo-Prime is a water-based galvanised steel primer designed for use over galvanised steel and Zincalume. Suitable for use on dry and weathered surfaces even in marine exposures. 

**Preparation**
- Ensure all surfaces to be painted are in sound condition, dry, free from dust, dirt, loose material and salt. Remove accumulated windblown salt by washing with Resene Paint Prep and Housewash (see Data Sheet D812).
- Wherever possible, any loose or peeling paint on the new galvanised steel or Zincalume should be removed to expose the shiny surface. Ensure the surface to be painted is thoroughly cleaned using Resene Roof and Metalwash (see Data Sheet D812). Disinfect downpipes until the total system has been applied and allowed to dry before using for the collection of drinking water. Direct rain-run off to a grassed area for the first two to three showers.
- Disinfect downpipes until the total system has been applied and allowed to dry before using for the collection of drinking water. Direct rain-run off to a grassed area for the first two to three showers.

**Application**
- **Resene Galvo-Prime** is best applied by brush to ensure full surface wetting of substrate is achieved.
- If galvanized steel or Zincalume is not in sound condition, use Resene Galvo-Coat (see Data Sheet D41).
- **When repainting** the bare primed steel, the same painting methods and materials as in the initial application should be used.

**Technical specifications**
- **Use** as a surface preparation coating for use on suitably prepared new or corrosion-weathered surfaces on exterior surfaces.

Quick check

**Use on:**
- Suitable for new or corrosion-weathered surfaces on exterior surfaces.
- Suitable for marine exposure. Apply after erection.
- Suitable for high zinc industries and any environment with long-lasting effects.
- **Gloss level:** Satin.
- **Coverage:** 12.2 square metres per litre coating.
- **Dry time:** 30 minutes at 18°C. Do not apply at temperatures below 10°C or above 25°C. Do not apply if temperature is likely to drop below this during the drying period. Drying is slowed by low temperatures and high humidity.
- **Recoat time:** Minimum 2 hours at 18°C.
- **Primer** required for marine exposure.
- **Application method:** Brush, roller, spray or airless spraying. Thinning:
- Can be thinned with up to 5% Resene Hot Water Additive to slow drying.

**Clean up:**
- **Water.**
- Colour range: Light green. Before use: Stir well with a wide flat stirrer.

**Tips:**
- For tips on maximising the impact of your decorating on the environment see the Resene website.

**Supplied with:**
- Resene ColourShop or the Resene website for a copy.

**Resene Promise of Quality**
- The Resene Promise of Quality is a guarantee of quality for all Resene paints. For your peace of mind, Resene uses only quality raw materials in the manufacture of its paints.

**Resene ColourShop**
- For more information, contact your local Resene ColorShop or the Resene website for a copy.
