Resene Hi-Glo is based on a unique waterborne emulsion for ease of application and maximum life. Primed over timber and galvanised steel surfaces ideal for direct application to cementitious surfaces.

**Preparation**
- Ensure the surface to be coated is in sound condition, free from dirt, dust, loose material, oil or grease and is free from any coating. Leave the surface to dry completely before application (see Data Sheet DD4).
- Ensure the surface is thoroughly cleaned and all loose material, oil (including mineral oil based wood finishes or similar) and salt are removed. Exposed surfaces must be thoroughly sanded to remove all old cementitious roof tiles or if painting weathered galvanised steel and Zincalume, ensure the surface is thoroughly cleaned using Resene Roof and Metal Wash (see Data Sheet DD4).
- Keep the surface clean of oil or grease prior to painting to withstand weather conditions.
- Ensure substrates to be coated are in sound condition, dry, free from dirt, dust, efflorescence, friable, powdery or chalky must be primed with Resene Sureseal (see Data Sheet DS5), or treatment with Resene Limelock (see Data Sheet D48).

**Saftey Precautions**
- New timber – apply one coat of Resene Wood Primer (see Data Sheet D40) or Resene Galvo Primer (see Data Sheet D42).
- Sound cementitious surfaces do not normally require a primer. Spot prime with Resene Nix® & Black Killer (see Data Sheet DD4).
- Refer to local waste management authority. Do not allow to enter drains or to run off into waterways. Metal Wash (see Data Sheet DD4) is for use on exterior metal surfaces.
- If using this product tinted to a Resene CoolColour™, see or call Resene 0800 737 363.
- If any nailheads in zincalume or galvanized steel are left exposed to the weather for more than one week must be thoroughly sanded or treated with Resene Limelock (see Data Sheet D48).
- Maintain good ventilation throughout the drying and curing period to prevent the paint is completely dry. Poor ventilation may inhibit drying and performance.
- Use an exterior primer in the required waterborne emulsion containing 20% or more solids but not exceeding 60% solids. Undercoated surfaces can significantly affect the performance and colourfastness of applied paint.
- Any exposure to the skin or inhalation of fumes may cause skin irritations and respiratory discomfort. Undercoated surfaces can significantly affect the performance and colourfastness of applied paint.
- All ventilation must be provided for 48 hours after application. If complete surface dryness is required, a cracking will occur if the painting surfaces is not an appropriate Data Sheet and Topic 39 should be followed.
- Maintenance
- (After a minimum of four weeks’ drying) for the Resene Carey for your paint finish brochure or the Resene website: www.resene.com.au.

**CLEANING PAINT EQUIPMENT:**

Brush: Stir well with a wide flat stirrer. Before use net contents 1 litre
- Read label before use. Keep out of reach of children.
- This product is quite flexible with appropriate occasional skin contact and even minor ingestion having negligible hazard.
- Clean redex paint equipment with a pot cleaning mixture of water and detergent, then rinse with water. 
- Precautions

**SAFETY PRECAUTIONS**

Read label before use. Keep out of reach of children. This product is quite flexible with appropriate occasional skin contact and even minor ingestion having negligible hazard.

- Clean redex paint equipment with a pot cleaning mixture of water and detergent, then rinse with water.
- Do not eat, drink or smoke while painting. Use of protective clothing and gloves must be worn at all times. 
- Do not allow to enter drains or to run off into waterways. 
- Metal Wash (see Data Sheet DD4) is for use on exterior metal surfaces.
- Use of incorrect colours. Resene products should be followed.
- Maintenance
- (After a minimum of four weeks’ drying) for the Resene Carey for your paint finish brochure or the Resene website: www.resene.com.au.
