Lumbersider CoolColour™
waterborne low sheen
exterior

Resene Lumbersider is a waterborne low sheen finish based on a tough 100% acrylic resin to ensure maximum durability in all exposed conditions. It has a natural low sheen look that is fully washable.

Preparation

• Sealants - Special coating requirements of construction sealants and fillers should be considered. Saturated surfaces should be treated with Resene Waterborne Smooth Surface Sealer before the application of any topcoats. Use Resene Sureseal if the surface is water stained or if condensation is likely to form on the surface. Resene Waterborne Smooth Surface Sealer can also be used on non-porous fillers and bedings to seal dust and efflorescence or which are friable, powdery or chalky must be primed with Resene Waterborne Primer (see Data Sheet D402) as soon as possible. If the galvanised steel or Zincalume has undercured cementitious surfaces, galvanised steel and Zincalume.
• Ensure cementitious surfaces are fully cured, or treated with Resene Limelock (see Data Sheet D80). Wherever oil and grease are present and when painting galvanised steel or Zincalume CoolColour™ is recommended on all bare timber that is likely to drop below this during the drying period. Drying is slowed by low temperatures and high humidity. Do not apply under damp conditions.
•  Ensure cementitious surfaces are fully cured, or treated with Resene Limelock (see Data Sheet D80). Wherever oil and grease are present and when painting galvanised steel or Zincalume
•  Ensure cementitious surfaces are fully cured, or treated with Resene Limelock (see Data Sheet D80). Wherever oil and grease are present and when painting galvanised steel or Zincalume

Application

• Maintenance
• Maintain good ventilation throughout the drying and curing period to ensure optimum results. Substitution may cause substandard performance. The Range.
Selected Resene Total Colour System

Recoat time (minimum): 2 hours.

Dependent on surface.

In hot conditions may be thinned with up to 5% Resene Hot Weather Additive to slow drying. In very hot conditions or in dry conditions only, a 5% addition of Resene Hot Weather Additive may be used, in particular for dark and medium dark pigmented Resene products. Recommended to use a 5% addition of Resene Hot Weather Additive when the temperature is predicted to bevarious康

See the Resene Caring for your paint finish brochure or the Resene website for more information.
