**Lusta-Glo**

**semi-gloss enamel**

**Product Information**

Resene Lusta-Glo dries to a beautiful, even, silky semi-gloss finish. Based on a tough solvolyser resin to resist fast drying and durability in all hardwearing areas. This layer enhances the paint’s ability to grip and dry with the unadorned and strongly coloured oxides associated with traditional semi-gloss paints.

**Preparation**

- Surfboards to be painted in an air-conditioned, thoroughly sailed to a fresh finish, dry from dirt, dust, and loose material.
- 
  - For Renovation, treat with either Resene Sureseal, Resene Broadwall Surface Prep & Seal (see Data Sheet D807), or Resene Emulsifiable Solvent Cleaner (see Data Sheet D804).
- 
  - For Re-coat, treat with Resene Sureseal and spray with water to remove any loose dirt or dust.
- 
  - If mould is present, treat with Resene Moss & Mould Killer (see Data Sheet D32).
- 
  - Plasterboard must be prepared to an appropriate level of finish. Either Resene Broadwall 3 in 1 (see Data Sheet D810), before coating. Undercured cementitious surfaces can significantly affect the performance and colourfastness of applied paint.
- 
  - Efflorescence on masonry must be treated.
- 
  - Fill cracks and holes with an appropriate filler after priming.
- 
  - Oil, grease, fly spots and nicotine stains should be removed using either Resene Emulsifiable Solvent Cleaner (see Data Sheet D804) or sugar soap.
- 
  - Maintain good ventilation throughout the drying and post application periods to ensure the paint is properly cured. This may require use of an extraction system when painting in marginal painting conditions. Do not use air or dehumidifiers to heat coated areas as these produce water that may blister and crater the finish.

**Basecoats**

- Usual number of coats: 2. Bright colours may require an additional coat.
- 
  - Application method: Brush, roller, or spray.
- 
  - Thinning: Resene Thinner No.2 (lower odour) or Mineral turps.
- 
  - Mix undercoat and finish coats together as Resene Lusta-Glo may thicken significantly in hot temperatures.
- 
  - Use Resene Acrylic Undercoat (see Data Sheet D404) or Resene Enamel Undercoat (see Data Sheet D500). Resene Acrylic Undercoat is recommended in critical lighting areas. Undercured undercoats may not be suitable basecoats for painting under stressed topcoats. Use Resene Sureseal if the surface is water stained or if condensation is likely to form on the surface.

**Topcoats**

- Use on: Interiors where a hardwearing semi-gloss finish is required.
- 
  - Gloss level: Semi-gloss, after three weeks.
  - Coverage: 16 square metres per litre.
  - Coverage and spreading rate for this product will achieve film thickness for both coats. For maximum spreading rates we recommend use with additional coats may need to be achieved for required film build and hiding. See the Resene website for more information.

**First Aid**

- In case of fire: Use foam, CO2, dry chemical for extinction.
- 
  - For spills: Resene Thinner No.2 (lower odour) or Mineral turps. Do not allow mineral turps to enter any drains.
- 
  - Inhale: Keep patient in fresh air and away from smoke, obstructions.
- 
  - Do not eat or drink.
- 
  - Keep out of reach of children.
