Resene Pre-Coated Steel Primer is a single pack adhesive primer for application to new factory coated steel and Galvanising to ready it for topcoating with Resene waterborne paints. Can also be used as an anti-corrosive primer for new or weathered zincalume and galvanising where a solventborne cool primer is required. Maximum heat reflections when topcoating with Resene CoolColours. Suitable for exterior use on horizontal and vertical applications, including roofs, walls and fences. Suitable for use on both zincalume and galvanised steel. Use on all types of post-formed and curved roofing to metal, wall cladding and fencing applications.

**Product Application**

- **Application method**: Apply by brush, roller or air spray. Resene Pre-Coated Steel Primer is best applied by brush to ensure flat surface wetting of substrate is achieved. Can also be used as an anti-corrosive primer for new or weathered zincalume and galvanising where a solventborne cool primer is required. Maximum heat reflections when topcoating with Resene CoolColours. Suitable for exterior use on horizontal and vertical applications, including roofs, walls and fences. Suitable for use on both zincalume and galvanised steel. Use on all types of post-formed and curved roofing to metal, wall cladding and fencing applications.

**Usual number of coats**

- 1 coat provided over a sound surface

**Dry time (minimum)**

- 3 hours at 18°C. Drying is accelerated by high humidity.

**Coverage**

- 4 litres will cover approximately 8 square metres. Coverage can be reduced due to surface dirt and contamination.

**Application method**

- Brush/roll out as much paint as possible onto newspaper before washing out brushes/rollers with Resene Solventborne Pre-Coated Steel Primer thinner.

**Application preparation**

- Surface must be painted in a sound condition, dry from rain, dust, material and alkali. Remove contamination. Suitable for use on both zincalume and galvanised steel. Use on all types of post-formed and curved roofing to metal, wall cladding and fencing applications. Suitable for exterior use on horizontal and vertical applications, including roofs, walls and fences. Suitable for use on both zincalume and galvanised steel. Use on all types of post-formed and curved roofing to metal, wall cladding and fencing applications.

**Surface preparation**

- Surface must be painted in a sound condition, dry from rain, dust, material and alkali. Remove contamination. Suitable for use on both zincalume and galvanised steel. Use on all types of post-formed and curved roofing to metal, wall cladding and fencing applications. Suitable for exterior use on horizontal and vertical applications, including roofs, walls and fences. Suitable for use on both zincalume and galvanised steel. Use on all types of post-formed and curved roofing to metal, wall cladding and fencing applications.

**Cleaning of paint equipment**

- Thinning and clean up with Resene Solventborne Pre-Coated Steel Primer thinner. For full technical instructions see Data Sheet D413.
