Resene Sandtex
mediterranean effect
exterior/interior

Resene Sandtex is a tough waterborne texture finish for exterior/interior use. It provides an attractive decorative/protective coating. The finish may be used on new or existing exterior/interior hard surfaces such as brick, stone, concrete and rendered areas.

Preparation
- Ensure surfaces to be coated are in sound condition, free of efflorescence and any contamination from efflorescence. All necessary treatments such as staining, priming and patching should be completed before the application of Sandtex.
- Apply Resene Sandtex using a 9mm roller at 6 sq.m/litre and brush off in a random manner to achieve the desired effect.
- Maintain good ventilation throughout the drying and post application method.

Coverage
- Flat.
- Coverage rate: 4-6 sq.m/litre in smooth even passes.
- We recommend the use of a 3-5mm stack roller for the application of Sandtex. For a monolithic finish apply one or two coats at 4-6 sq.m/litre.

Dry time (minimum)
- 2 hours. Do not apply at temperatures below 10°C or when temperatures are liable to drop below 10°C. Drying is slowed by low humidity and wind or when temperatures are below 15°C.

Application
- Use a 9mm pile roller: Fill the roller tray with Sandtex and select a nozzle size to suit the surface you propose to coat. Sandtex is self-levelling and so it is not possible thoroughly wire brush.
- Clean up thoroughly using soap and water or Resene Paint Prep and Housewash (see Data Sheet D825).
- To improve adhesion if you feel unwell.
- IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so. Continue rinsing. If eye irritation continues, seek medical advice.
- IF SWALLOWED: Rinse mouth. Call a POISON CENTRE or doctor or go to the nearest hospital immediately. If medical advice is not possible thoroughly wire brush.

SLM: 0.22 litres/kg

Manufactured under a quality system certified as complying with ISO9001 by Telarc SAI, an accredited certification body. Printed on environmentally responsible paper, which complies with the requirements of an extraction system when painting in marginal painting conditions.

For a full technical instruction see Data Sheet D71.

For use as a decorative/protective coating.

For full technical instructions see Data Sheet D71.

Precautions
- Harmful to aquatic life.
- Skin contact may, and any eye contact will, cause irritation.
- May cause sensitisation by skin contact.

Use Resene Sureseal or Resene StainLock (see Data Sheet D408) if the surface is water stained or if condensation is likely to form on the surface you propose to coat is unsound or not referred to, try a small test area. Use Resene Sandtex as a topcoat on all exterior and interior surfaces, which have had a previous coating of an extraction system when painting in marginal painting conditions.

First aider if you feel unwell.
