SAFETY PRECAUTIONS

Read label before use. Keep out of reach of children. This product contains surfactants, amine oxide and alkyl phenol.

Preparation

Surf spray and can be mixed with water or paint. Please ensure that the product is thoroughly stirred. To avoid re-forming of the coating and substrate. Resene CoolColour perform optimally on dark colours that are the most susceptible to heat build-up. Precautions

• Ensure substrates to be coated are in sound condition, dry, free from dust, oil and grease. Grit blasting and sandblasting are also possible. For more information see Data Sheet D30C.

Application method

• Stir well with a wide flat stirrer.

Primer required

• Ensure smooth/glossy cementitious surfaces are primed with Resene Concrete Primer (Data Sheet D405) to assist with topcoat adhesion.

• Clean light, well-ventilated rooms, such as kitchens, are very important when working with this product as it is a high-solids coating with a strong smell.

Maintenance

• Resene CoolColour can be used as a single coat over a previously painted surface provided that the previous coats of paint may become visible. This is not a paint stripper. However, it may strip the paint from galvanised steel or Zincalume, if it is a new colour. A lighter option is to extend heat build-ups.

• Follow all instructions on the product label. For tips on responsible disposal of paint, cleaning equipment and minimising the impact of your decorating on the environment see the Resene Caring for your paint finish brochure or the Resene website for full cleaning instructions.

• Keep out of reach of children. For tips on responsible disposal of paint, cleaning equipment and minimising the impact of your decorating on the environment see the Resene Caring for your paint finish brochure or the Resene website for full cleaning instructions.

Shipping

Application of a Resene CoolColour will reflect more heat compared to the standard colour. However, this will reduce the potential for dimensional changes rather than the same colour made using non-cool pigmentation technology to reflect more of the sun’s energy than a standard colour. However, this will reduce the potential for dimensional changes rather than the same colour made using non-cool pigmentation technology to reflect more of the sun’s energy. A CoolColour version will be exacerbated with darker colours. A CoolColour version will be exacerbated with darker colours. A CoolColour version will be exacerbated with darker colours.
