**SAFETY PRECAUTIONS**

Read this sheet before use. Take extra care near children. This product contains zinc dust, which is toxic when inhaled. Keep out of reach of children and pets. Use in a well-ventilated area.

**WHEN APPLYING**

Dry downpipes for 24 hours before use. Never apply paint when air temperature is expected to drop below 10°C or when temperatures are liable to fluctuate below 10°C. When painting exterior surfaces keep metalwork such as window frames, downpipes, gutters and screen doors closed as much as possible to avoid condensation, which may be stored within the paint film, leading to peeling and blistering. The recommended minimum film thickness varies with the type of surface to be coated. The recommended film thickness for normal interior surfaces is 30 microns; for windows and doors, 45 microns; for flashings, 60 microns; and for exterior surfaces, 75 microns.

**SPOILAGE**

Avoid release to the environment. Avoid release to the SMOKING area. Do not release to the environment. Use for recommended use only. Do not use on surfaces that have been treated with zinc dust or zinc metal surfaces and cementitious roof surfaces. Available in limited quantities in different colors. Use for recommended use only. Do not use on surfaces that have been treated with zinc dust or zinc metal surfaces and cementitious roof surfaces. Available in limited quantities in different colors.

**DISPOSAL**

Dispose of wash-up water onto grassy/unsealed area or into inside drain or septic tank.

**SPILLS**

• If due to climatic conditions foam persists after rolling, add 5% Colour Bond® to 100% paint. Refer to Resene ColorShop or Reseller for technical advice and information.

**MIXING**

Cool to touch. Check with Resene staff whether a Resene CoolColour topcoat for optimum performance. Use on bare cementitious roof tiles before topcoating. For commercial versions, use a cap to avoid losing a flow rate of 1000 psi. See a chart in the data sheet. Use it up in a month or two. Avoid release to the environment. Use for recommended use only. Do not use on surfaces that have been treated with zinc dust or zinc metal surfaces and cementitious roof surfaces. Available in limited quantities in different colors.

**PROTECTION**

Spray the basecoat to allow it to cool to touch. Do not paint in wet conditions. The recommended minimum film thickness varies with the type of surface to be coated. The recommended film thickness for normal interior surfaces is 30 microns; for windows and doors, 45 microns; for flashings, 60 microns; and for exterior surfaces, 75 microns.

**MATERIALS**

• Primer of the bare substrate must be done when exposure of the bare substrate is likely to exceed 24 hours. For full technical instructions see Data Sheet D315S.

**PACKAGING**

• Priming of the bare substrate must be done when exposure of the bare substrate is likely to exceed 24 hours. For full technical instructions see Data Sheet D315S.
