Resene Summit Roof is a unique waterborne satin finish for ease of application and maximum life over well weathered exterior finishes. It is suitable for use on new and previously uncoated galvanized iron, new aluminium, COLORSTEEL®, COLORBOND®, properly prepared metal surfaces (6 months or more exterior exposure) and COLORSTEEL® and properly prepared cementious substrates, new previously uncoated fibre cement or plaster, and plasterboard. This product is not suitable for use on opening sashes and doors.

Equipment:

• Use a 10 cm (4 in) or 8 cm (3.5 in) or 6 cm (2.5 in) wide flat-ended brush or roller. A wide flat-ended brush is recommended for application on horizontal surfaces such as roofs, and lay off with a brush. Foam craters create weak spots in the coating and reduce its lifespan and increase the level of coating maintenance required to maintain an acceptable visual appearance. Resene Summit Roof is formulated to be applied at the recommended flat spread rate. If a CoolColour variant of this product is being used, it must be used with a primer coat of Resene Quick Dry white (see Data Sheet D45) or Resene Galvo-Prime (see Data Sheet D402) immediately before applying the final topcoat.

Coverage:

Usual number of coats: Two. Bright colours may require an extra coat.

Primer required: A primer is not required for Resene Summit Roof. This product is suitable for use on new previously uncoated galvanized iron, new aluminium, COLORSTEEL®, COLORBOND® and properly prepared cementious substrates, new previously uncoated fibre cement or plaster, and plasterboard. This product is not suitable for use on opening sashes and doors.
