Resene Uracryl 403 urethane acrylate
gloss base

Engineered Coating Systems

Resene Uracryl 403 is a high performance two component finish coat with excellent resistance to abrasion, moisture, petrol solvents, and oil and grease and alkalis and acids. The most unusual feature of Resene Uracryl 403 is that, unlike most other classes of high performance finishes which are hard and brittle, this product gives just as good a protection. The uncompromised combination of aliphatic urethanes and urethane reactive acrylics makes this system unsurpassed for gloss and colour retention.

General
• Do not use the product on the surface you propose to paint is unsound or not referred to, contact your Local Authority for disposal information.
• Ensure correct wet film thickness is applied to achieve desired dry film thickness. Ensure allowance must be made for any thinner added.
• The “Dew Point” requirement can be presumed to be satisfied if a thin film of the mixed product is given for a specific temperature. Higher temperatures will allow the use of thinner.
• The temperature of the substrate should be 3˚C above the “Dew Point”.

Prepare the substrate for application:
• Clean the surface with detergent and de-greaser.
• Sand any dust from the surface.
• Test the surface with a spar test for soundness. Any non-conforming parts of the surface should be treated with the appropriate product.
• Remove any existing coatings, rust, etc. with sandblasting or abrasive blasting. Be sure to flush the blast box with water before proceeding to ensure no airborne dust is present.
• Carefully fill any cracks or holes with a suitable proprietary fillers. A minimum of 1 hour is recommended prior to application.

Ensure compatibility with the product to be used:
• Ensure the product is suitable for use and will not affect the performance. Contact your Local Resene Representative.

Testing
• Ensure the prepared surface is satisfactory. Any non-conforming parts of the surface should be treated with the appropriate product.
• Do not apply over inadequately prepared foundations. The product is not suitable for use on surfaces that are likely to be exposed to high moisture or high chloride conditions.

Note: Please ensure that use of this product is compatible with whatever paint system is to be used.

Composition
• Resene Uracryl 403 is a high performance two component finish coat with excellent resistance to abrasion, moisture, petrol solvents, and oil and grease and alkalis and acids.

Quick check

Available in BSS White Colours, White Colours and Clear. Harmful to aquatic life with long lasting effects.
