**Resene Vinyl Wallpaper Sealer**

**interior**

Resene Vinyl Wallpaper Sealer is formulated to seal in the plasticiser found in vinyl wallpapers. Vinyl wallpaper coated directly with standard paint finishes can become sticky as the plasticiser in the wallpaper migrates through the paint finish affecting its cure.

**Preparation**

- Ensure areas to be painted are in a sound condition, dry free of dust, dirt and loose material.
- Cleaning methods should be with soft cloths as abrasives will damage the surface. Allow to dry.
- Thoroughly clean down the surface to remove all loosely adhered material. Treat areas of moss or mould infestation with Resene Moss & Mould Killer (see Data Sheet D80), correctly diluted with water. Leave for up to 48 hours to achieve full kill. For heavy infestations further applications may be needed. Wash thoroughly with clean water to remove residues.
- This product may be used to seal a wide variety of wallpapers. If the surface you propose to seal is unsound or not referred to, try a small test area first or contact your local Resene ColorShop or Reseller for advice.

**Application**

- Resene Vinyl Wallpaper Sealer is very fast drying so you need to work quickly.
- One full coat to seal the wallpaper. Allow to dry for two hours before applying second coat. Further applications may be needed. Wash thoroughly with clean water to remove residues.
- This product may be overcoated with standard acrylic or enamel systems. May be overcoated with

**Safety Data Sheet**
