Walk-on flooring and paving paint
interior/externeer surface

Resene Walk-on is based on tough acrylic resin to give maximum abrasion resistance in a single pack. The fresh film of Resene Walk-on is designed to reduce the loading of suspended solids entering stormwater drains.

Preparation
- Surfaces to be coated are to be conditioned. Dry from dirt, dust, debris, and oil (including mineral oil based finishes or linseed oil) contaminants.
- Remove accumulated contamination salt by washing with Resene Paint Prep and Rinseoff (see Data Sheet D322).
- Base coat must be allowed to cure at least 24 hr (see Data Sheet D322).
- For interior use, especially where dark colors are planned, apply a coat of Resene CoolColours (see Data Sheet D48).
- For exterior use, especially where dark colors are planned, apply a coat of Resene CoolColours (see Data Sheet D48).
- Sanding and dusting of new and freshly painted concrete is recommended to assist with heat reflectance.

The floor must be left to cure for a minimum of four weeks (after a minimum of four weeks' drying) before the first coat.

For extra slip resistance add one pack (500gm) of Resene SRG Grit per litre of Resene ConcreteSeal 3 in 1 (see Data Sheet D409) but only in the absence of a curing membrane.

• Trafficable areas coated with this unmodified product will not comply with the Building Act Clause D1.3.3(d). Product may be slippery when wet.

Keep extra slip resistance with the Building Act Clause D1.3.3(d). Product may be slippery when wet.

Use with adequate ventilation. Do not eat, drink or smoke when using.

Harmful to aquatic life. Harmful to the soil environment.

Skin contact may, and any eye contact will, cause irritation.

Read label before use. Keep out of reach of children. This material is quite bland; with vapour, occasional skin contact and surface preparation method and that the colour in this container is the same as selected. When using multiple packs of this product on the painted surface cool to touch. Check with Resene staff whether a Resene CoolColour is right for your project.

Resene CoolColour will reflect more heat than the same colour made using non-cool pigmentation and reduce the energy required to condition water.

Also available as Resene Walk-on CoolColour to help keep your painted surface cool.
