Wintergrade
Lumbersider
waterborne low sheen
exterior/interior

KEEP OUT OF REACH OF CHILDREN
SAFETY PRECAUTIONS
Read label before use. Keep out of reach of children. This material is quite bland; with vapour, occasional skin contact and even minor ingesting having negligible hazard. Weared skin contact may, and any eye contact will, cause irritation. Harmful to aquatic life with long lasting effects.

PRECAUTIONS
USE WITH ADEQUATE VENTILATION. DO NOT EAT, DRINK OR SMOKE WHILE USING!
Store in original container in a cool, dry, well-ventilated area. Do not store in original container in a cool, dry, well-ventilated area. Do not store in original container in a cool, dry, well-ventilated area. Do not store in original container in a cool, dry, well-ventilated area. Do not store in original container in a cool, dry, well-ventilated area.

For full technical instructions see Data Sheet D34a.

For use as a decorative/protective coating.

Resene Lumbersider is a waterborne low sheen finish based on a tough 100% acrylic resin to ensure maximum durability in all exposed conditions. Imparts a natural low sheen look that is fully washable.

Preparation
• Ensure substrates to be coated are in sound condition, dry, free from dirt, dust, loose material, oil (including mineral oil based wood finishes or similar) and salt.
• Remove accumulated windblown salt by washing with Resene Paint Prep and Housewash (see Data Sheet D812).
• Waterblasting is the best surface preparation prior to painting of weathered, cementsitious surfaces, galvanised steel and Zincalume.
• If mould is present, treat with Resene Moss & Mould Killer (see Data Sheet D80). Efflorescence on masonry must be treated (see Data Sheet D83). Wherever oil and grease are present and when painting galvanised steel, Zincalume, ensure the surface to be painted is thoroughly cleaned using Resene Roof and Metal Wash (see Data Sheet D88). Flush clean with water.
• Disconnect downpipes until after the first heavy shower of rain before using for collection of drinking water. Ensure the run-off is diverted onto a garden or grassed area.
• Fill cracks and holes in timber after priming. Fill cracks and holes in interior walls before sealing.
• Round all sharp timber edges. Any bare timber surface that has been left exposed to the weather for more than one week must be thoroughly sanded or treated with Resene Timberlock (see Data Sheet D48).
• Ensure cementsitous surfaces are fully cured, or treated with Resene Limtedeck Wood Primer (see Data Sheet D809), before coating. Undercoated cementsitous surfaces can significantly affect the performance and colourfastness of applied paint.
• All sanding dusts can be harmful and appropriate protection must be worn. If eye irritation persists get medical advice or attention.

FIRST AID
IF SWALLOWED: Rinse mouth. Call a POISON CENTRE, doctor or physician if you feel unwell.
IF INHALED: If breathing is difficult, remove to fresh air and keep at rest in a position comfortable for breathing.
IF ON SKIN (or hair): Rinse skin with plenty of soap and water. If skin irritation or rash occurs get medical advice or attention.
IF IN EYES: Rinse cautiously with water for several minutes. If eye irritation persists get medical advice or attention.
IF INHALED: If breathing is difficult, remove to fresh air and keep at rest in a position comfortable for breathing.
IF SWALLOWED: Rinse mouth. Call a POISON CENTRE, doctor or physician if you feel unwell.

Maintenance
(after a minimum of four weeks’ drying)
See the Resene Caring for your paint finish brochure or the Resene website for full installation instructions.

Be Paintwise
For tips on responsible disposal of paint, cleaning equipment and minimising the impact of your decorating on the environment see the Resene website. Do not discharge any paint into the environment. Resene PaintWise (NZ) or paintback.com.au (Australia) accepts residual unwanted paint and packaging. Or contact your Local Authority for disposal information.

Priming
• Bare timber - Resene Timberlock is recommended on all bare timber that is to be primed.
• Resene Lumbersider is formulated to adhere to fresh timber surfaces. Dark colours can cause the rapid drying of damp timber. A coat of Resene Wood Primer (see Data Sheet D40) will slow the rate of drying and lessen the danger of warping.
• Sealants - Special coating requirements of construction sealants and fillers should be followed.
• Plasterboard, fibrous plaster and their stoppings should be primed (e.g. Resene Broadwall – see Data Sheet D403).
• Hardboard must be sealed (e.g. Resene Sureseal - see Data Sheet D42) to prevent flow of the topcoats. Use Resene Sureseal if the surface is water stained or if condensation is likely to form on the surface.
• Some ‘sof’ plasterboard preparatory products and undercoated gypsum based stoppings may not be suitable basecoats for painting under stressed conditions. Reinforcement with a saturation coat of a fully penetrating primer such as Resene Sureseal may be required. Use Resene Sureseal or Resene Stainlock (see Data Sheet D408) if the surface is water stained or has yellowed due to prolonged exposure to sunlight. Resene Waterborne Smooth Surface Sealer can be used if the room has ventilation drawing out water into the ceiling. Set Resene Sureseal or Resene Stainlock close to the ceiling, not between courses.
• Galvanised steel or Zincalume should not be allowed to weather. Apply one coat of Resene Galvo One (see Data Sheet D41) or Resene Galvo-Prime (see Data Sheet D402) as soon as possible. If the galvanised steel or Zincalume has weathered, prime it with Resene Sureseal.
• Repaints - spot prime all bare areas with the same primer shown for new work and proceed as for new work.
• Cementsitous surfaces, fibre or particle board do not normally require a primer.

Application
• Apply two coats in the required colour allowing at least two hours between coats.
• Maintain good ventilation throughout the drying and post application curing period to ensure the paint is properly cured. This may require use of an extraction system when painting in marginal painting conditions. Do not use gas or diesel burners to heat coated area as these produce water that will inhibit drying and curing. Poor ventilation may affect appearance and performance.

Dry time (minimum): 4-6 hours. Dependent upon weather conditions. Apply in temperatures 3°C-10°C. Application outside this temperature range may affect curing and application properties. Do not apply at temperatures below 3°C or when temperatures are liable to drop below this during the drying period.

Recoat time (minimum): 4 hours. Recoat when first coat is tough enough to resist the pressure of a firmly pressed, twisted thumb.

Primer required: Dependent on surface.

Application method: Brush, speed brush, synthetic fibre roller or spray.

Clean up: Water.

Colour range: White and colours off-white.

Before use: Stir well with a wide flat stirrer.
