

Make an entrance

Create a character door with this clever hack using photo frames and paint.

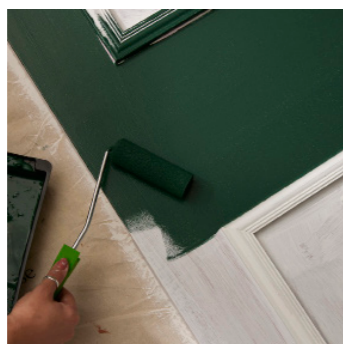

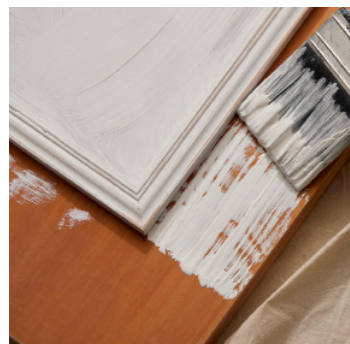

YOU WILL NEED

- Door (1980mm x 860mm)
- Drill
- Resene dropcloth
- Small cloths
- Sandpaper or electric sander
- 2 photo frames, 30cm x 40cm, with the backing removed
- Strong construction glue
- Resene MacGyver paintbrush
- Small roller
- Small paint tray
- 1L Resene Quick Dry Undercoat
- 1L Resene Lustacryl in your chosen Resene colour (we used Resene Palm Green)

INSTRUCTIONS

- 1 Remove the door handle using the drill. Lay the door on a flat surface, on top of the dropcloth, and sand thoroughly. Once finished, wipe off the sawdust with a damp cloth.
- 2 On the door, mark out where the frames will be placed. We chose the centre of our door, with a wide gap in the middle.
- 3 Apply the glue to the undersides of the photo frames, then place the frames glue-side down in the positions you've marked out on the door. Press frames down firmly, cleaning up any excess glue with a damp cloth. Leave to dry for the amount of time stated on the glue packet.
- 4 Using the paintbrush, apply Resene Quick Dry Undercoat evenly. Leave to dry and apply a second coat if needed.
- 5 Fill the paint tray with Resene Lustacryl in your chosen Resene shade. Using the roller, paint the door evenly. Leave to dry. Apply a second coat.
- 6 Once dry, reattach the door handle with the drill and mount the door. 🛠️
